# Chidghana Hemantharaju

Data Analyst & Project Manager | 150+ Projects Delivered On-Time | Python, SQL, Power BI | Reducing Risk, Maximizing Results  
Greater Munich Metropolitan Area

## Summary

Data Analyst | Project Manager | 150+ Projects Delivered

I turn project chaos into measurable success. Here's what I deliver:

# 90%+ on-time delivery rate - Built predictive risk models to identify at-risk projects 60+ days early

# Data-driven decision making - Created 50+ dashboards tracking project KPIs, timeline variance, and budget health

# Automated project workflows - Python scripts that save 15+ hours/week on manual reporting and analysis

# Stakeholder clarity - Transformed ambiguous requirements into clear action plans using data visualization

What I actually do:

- Analytics: SQL queries, Power BI dashboards, statistical analysis for project performance
- Risk Management: Predictive modeling (Python, machine learning) to forecast project success probability
- Automation: Build Python scripts to handle repetitive PM tasks (budget forecasting, variance analysis, alerts)
- Communication: Translate technical data into executive-level insights

My approach: Every project generates data. I use it to make smarter decisions, reduce overruns, and keep teams aligned.

Currently: Master's in Business Analytics & Data Science at EU Business School (specialized in predictive modeling)

Previously: Managed 150+ interior design projects at Butterfly Interiors using AI tools and data analysis

Tech Stack: Python (pandas, numpy, scikit-learn) | SQL | Power BI | Excel | Agile/Scrum

Looking for: Roles where you need someone who bridges analytics and execution, where projects run on data, not hope.

Let's connect if you're building data-driven teams or need someone to make your projects predictable.

---

## Experience

### Butterfly Interiors

Manager / Project Analyst / Project Management / Data Analyst

October 2020 - April 2024 (3 years 7 months)

Bengaluru

- Managed 150+ interior design projects with 92% on-time delivery rate using data-driven project tracking and AI tools
- Reduced project meetings by 40% - Created 50+ Power BI dashboards providing real-time visibility into project status, timeline variance, and budget health
- Automated repetitive tasks - Built Python scripts saving 15+ hours/week on budget reporting, variance analysis, and stakeholder alerts
- Improved client satisfaction by 30% - Analyzed client preference data (1000+ responses) to optimize design selection process from 14 days to 3 days
- Predicted project delays 60+ days in advance using Excel-based forecasting models, enabling proactive risk mitigation
- Managed €500K+ in project budgets while maintaining 98% budget accuracy through data-driven cost tracking
- Trained team on data-driven decision making - Implemented dashboard-based project governance reducing scope creep by 25%
- Integrated AI tools (ChatGPT, Zapier) into workflows - Reduced manual administrative tasks by 35%
- Coordinated cross-functional teams (design, vendors, contractors) using structured data dashboards for clear communication
- Created project templates standardizing 20+ common workflows - Reduced project setup time by 50%

---

## Education

EU Business School

Master's degree, Business Analytics And Data Science · (April 2024 - October 2025)

Bangalore University

Bachelor of Commerce - BCom, Accounting and Finance · (2017 - 2020)
